SUMMARY

Senior Software Engineer with 8+ years building scalable JavaScript and TypeScript applications and full-stack systems from concept to production. Strong across React, Next.js, Node.js, and NestJS, with deep experience in frontend architecture, real-time systems, and AI/LLM-powered features (OpenAI, Anthropic) - from prompt pipelines to production integration. Hands-on with agentic AI development workflows (Claude Code, MCP, Claude Skills) as a daily driver for engineering, not just as a feature area. Background spans framework-agnostic library engineering, performance optimization, and API design. Comfortable leading: promoted to tech lead, mentoring developers, and shipping products end-to-end, including independently built and monetized side projects.

SKILLS

JavaScript, TypeScript, React, Next.js, Node.js, NestJS, Symfony, Twig, REST APIs, GraphQL, WebSockets, Electron, Microservices, System Design, Frontend Architecture, Performance Optimization, State Management, Redux, Zustand, PostgreSQL, MongoDB, Firestore, Supabase, Docker, CI/CD, GitHub Actions, LLM Integration (OpenAI, Anthropic), AI Coding Agents (Claude Code, Codex), MCP, Claude Skills, CLAUDE.md/AGENTS.md configuration, Stripe, Storybook, Vercel, Tailwind CSS, MUI

PROFESSIONAL EXPERIENCE

Senior Frontend Developer (Oct 2024 - Present)

ITSharkz, Warsaw (Remote)

- Develop and maintain SSR web components for Qobuz.com (hi-res music streaming) across all regional domains, using Symfony (Twig) and TypeScript (Stimulus), prototyped and integration-tested in Storybook before release.
- Build complex frontend modules for Swizy (B2B events/discounts platform) using Next.js, React, and GraphQL within a large modular monolith of interdependent subsystems.
- Engineer interactive interfaces from scratch, including a Google Maps event explorer with dynamic GraphQL-driven data, custom styling, popups, hover states, and marker clustering for dense areas.
- Implement accessible, responsive UI aligned with design-system and RGAA (French government accessibility) standards.
- Integrate AI coding agents (Claude Code, Codex) into daily development, configuring MCP servers (GitHub, Jira, Figma, Storybook), custom Claude Skills, and CLAUDE.md/AGENTS.md project instructions to accelerate delivery and enforce team conventions.
- Review PRs and mentor a colleague, contributing to architectural decisions on new feature integrations.
- Collaborate with backend teams on API design and data contracts for scalable integration.

Senior Software Engineer (Sep 2021 - Aug 2024)

Dashbouquet Development, Warsaw (Remote)

- Delivered full-stack web and desktop applications using React, Next.js, Node.js, NestJS, PostgreSQL, and Electron across multiple product-driven client projects.
- Promoted to Tech Lead on an AI dating-assistant app: led a team of 2, drove the feature roadmap directly with the client, and owned technical decisions and code review.
- Led backend migration from serverless Firebase to a NestJS server, cutting LLM response times from 10-15s and improving stability; architected the AI pipeline (image understanding via Anthropic Claude, message generation via OpenAI) with prompt versioning, structured outputs, and streaming responses.
- Designed AI-powered features across multiple projects using OpenAI and Anthropic models, including prompt engineering, model/prompt configuration and observability (Braintrust), and OCR research (Tesseract, vision models).
- Built real-time computer-vision advertising systems using WebSockets, integrating camera streams and human-detection neural networks into interactive Electron + React applications.
- Developed Web3 reward and airdrop modules with social integrations (Twitter/X, Discord, Telegram, Instagram), OAuth flows, and smart contract interaction.
- Took ownership of technology selection, infrastructure setup, and database design; mentored developers, participated in hiring, and rebuilt a team after turnover.

Middle Software Engineer *(Jul 2019 - Aug 2021)*

XB Software, Minsk (Office)

- Developed a framework-agnostic JavaScript widget library (DHTMLX Suite) compatible with React, Angular, Vue, Svelte, and legacy environments.
- Contributed to a custom reactive rendering mechanism built on top of the JavaScript event loop and microtask queue, implementing component lifecycle behavior in vanilla JS.
- Built extensible component architecture using class-based patterns with controlled rendering cycles and performance optimization.
- Ensured cross-browser compatibility including legacy support (IE8+) using Babel, polyfills, and advanced CSS workarounds.
- Covered components with unit and e2e tests (Jest, Mocha/Chai, Cypress).
- Integrated widgets into diverse client environments and created demo applications and usage snippets to support product adoption.
- Mentored 2 junior developers and contributed to internal knowledge sharing.

Junior Full Stack Engineer *(Aug 2017 - Jul 2019)*

Travel Agency, Minsk (Office)

- Designed and developed a full-stack CRM system from scratch for internal booking management and sales workflow automation.
- Implemented role-based access control (admin and operator panels) and complex multi-step business logic for ticket processing pipelines.
- Built backend services using PHP and JavaScript within a local network server environment.
- Developed real-time features using WebSockets to track user activity and status updates.
- Implemented IP restrictions and basic network-level protections to secure internal infrastructure.
- Worked directly with the business owner to gather requirements, iterate on features, and align development with operational needs.

- Gained hands-on experience with SCSS, browser APIs, and system monitoring tools.

PET PROJECTS

[Stash Loot Stack](#) | Web Application (Next.js + Supabase)

- Designed and developed a production-ready collectibles portfolio tracker using Next.js, React, TypeScript, and Supabase, deployed on Vercel.
- Built authenticated asset management across 8 TCGs (Pokemon, Magic, Yu-Gi-Oh and more), CS2 skins, LEGO, Funko, and Hot Wheels, with Steam integration for automatic CS2 inventory import.
- Implemented portfolio dashboards with total value, profit/loss, ROI, allocation views, activity history, and price history charts.
- Integrated automated market price synchronization via CSFloat API (CS2) and aggregated data feeds (TCG), refreshed through scheduled cron jobs.
- Shipped a Stripe-based paid tier unlocking higher item limits and configurable email price alerts (threshold and percentage rules) via Resend.
- Owned full product lifecycle: domain, paid Google Ads acquisition, and monitoring/analytics via Sentry and PostHog.

[DeepMinute](#) | Web Application (Next.js)

- Independently designed and deployed a production-ready web application using Next.js and React.
- Implemented SEO optimization, metadata structuring, and performance tuning for search visibility.
- Integrated Google Ads and Vercel Analytics to track traffic and optimize user acquisition.
- Managed full deployment lifecycle including custom domain configuration and hosting on Vercel.

[Relax Scramble](#) | Desktop Steam Game (Electron + React)

- Designed and shipped a cross-platform desktop game using Electron, React, TypeScript, and Node.js, from concept to Steam release.
- Implemented infinite procedural gameplay with dynamic scoring, daily challenge modes, daily quests, and selectable themes.
- Built real-time 2-player online co-op on a shared split board (6×6, role-owned halves) over Steam lobbies with peer-to-peer state synchronization.
- Migrated the Steamworks integration from Greenworks to the actively-maintained steamworks.js native bindings: cloud saves, achievements, quests, rich presence, and Steam Deck support.
- Built custom Steam achievements with stat tracking (score milestones and hidden awards), and localized the game into 8 languages.
- Architected secure main/renderer communication via Electron IPC with a contextBridge preload layer (context isolation) for game state, Steam calls, and persistence.
- Managed the full release lifecycle: packaging (electron-builder + NSIS), debugging, SteamPipe depot/branch management, and store configuration.

EDUCATION

Master of Engineering in IT & Ergonomics.

Belarusian State University of Informatics and Radioelectronics (2014 - 2020)

LANGUAGES

- Russian (native)
- English (C1)
